

EcoFly is a unique environmental design and management tool that is extremely simple to use, but very powerful. Its high flexibility gives you the freedom to decide whether you want to use it for PAS2050 carbon foot printing, for EuP compliance, or as a comprehensive eco-design tool using life cycle data from databases such as ILCD, Ecoinvent, Gabi, SPINE and/or your own life cycle data. See the full specification at:

<http://www.ecoflyonline.com/documents/ecoflyspec.pdf>

New Features in Version 3.0

- A separate simple user interface for designers.
- Depository from which Environmental managers decide which data is available to users.
- The ability to include sustainability scoring such as Eco-Indicator 99
- Global search capabilities on all the different user home pages.
- Graphs interface improved for faster graph generation, more graph types, and able to compare a design with any other designs in EcoFly.
- Ability if required to limit user to visibility of a single customer or business.
- Allows entry or import of parts in grams, kilograms or tonnes.
- Bills of materials able to handle parts with mixed weight units.
- In User Administration a user can be assigned one of 17 different languages.
